# Bringing the Information Revolution to the Electricity Infrastructure

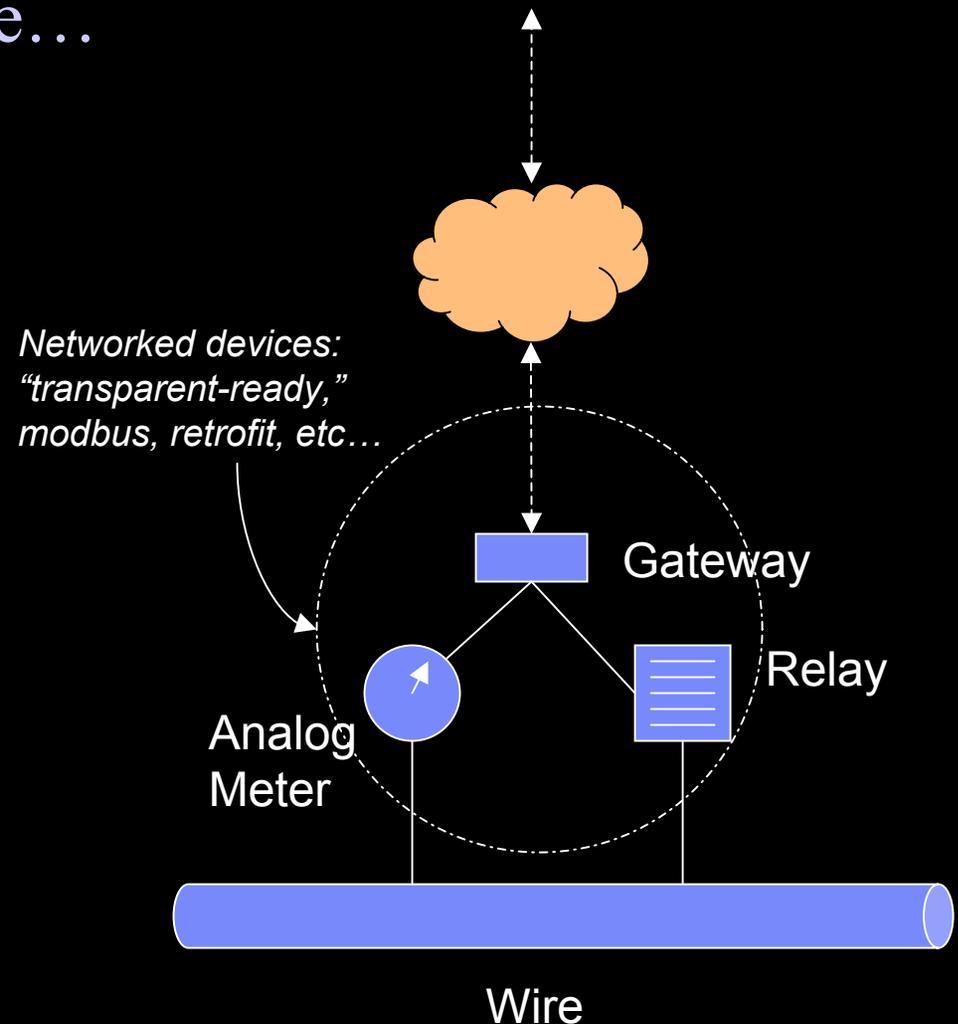

Distribution System of the Future, Department of Energy, Washington, D.C.

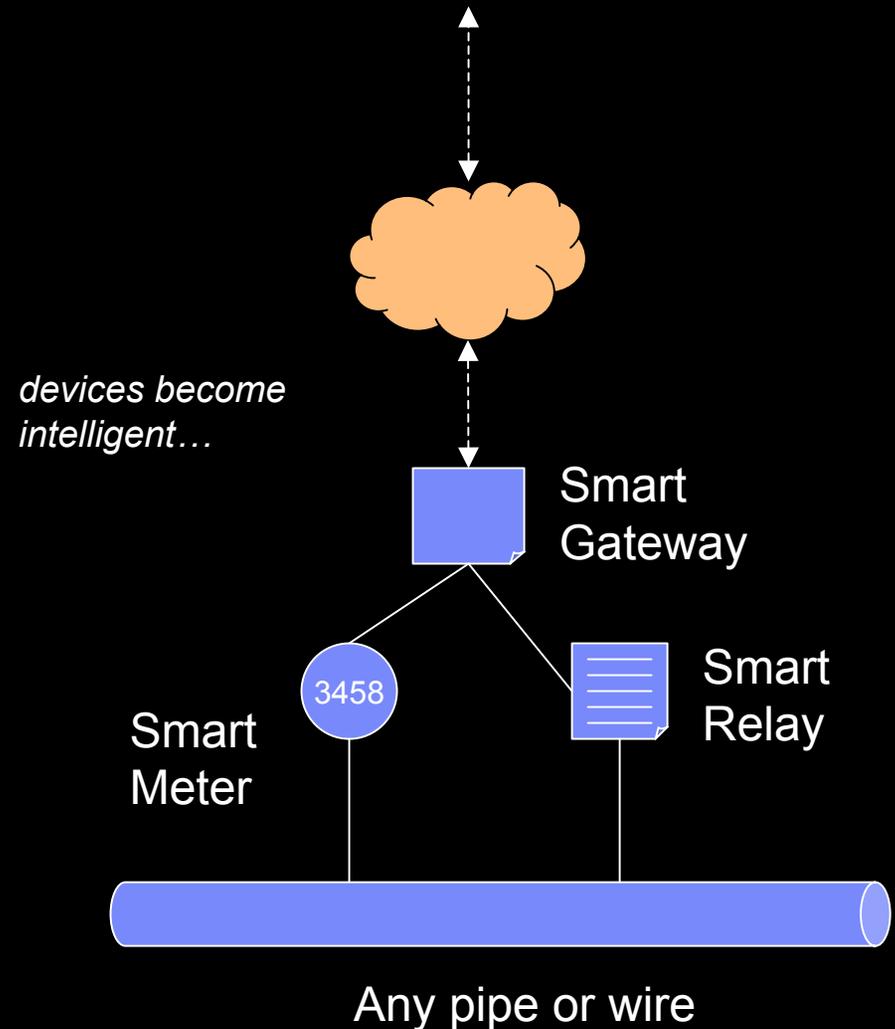

Transformation number one...

Electricity  
infrastructure  
is integrating  
with I/T  
systems over  
the *internet*...

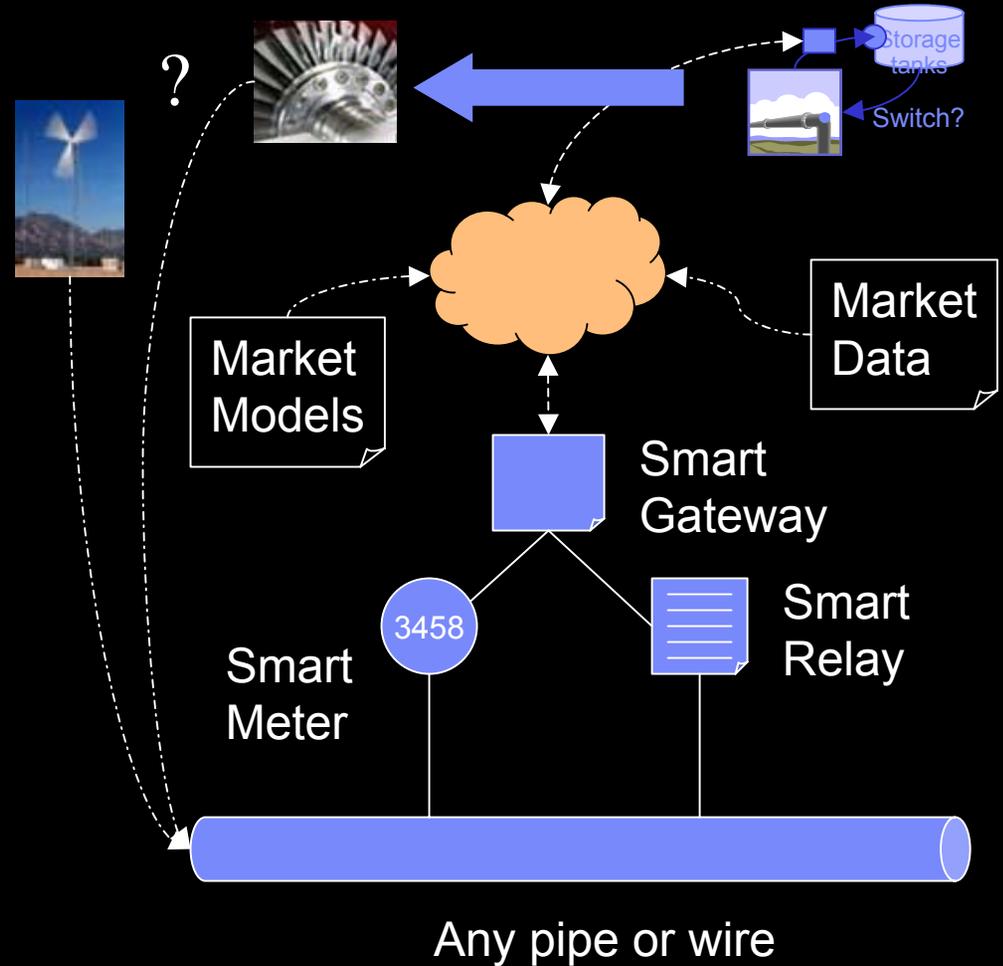

Impact...

Security,  
Privacy &  
Trust must be  
*embedded*;  
software will  
replace  
hardware...

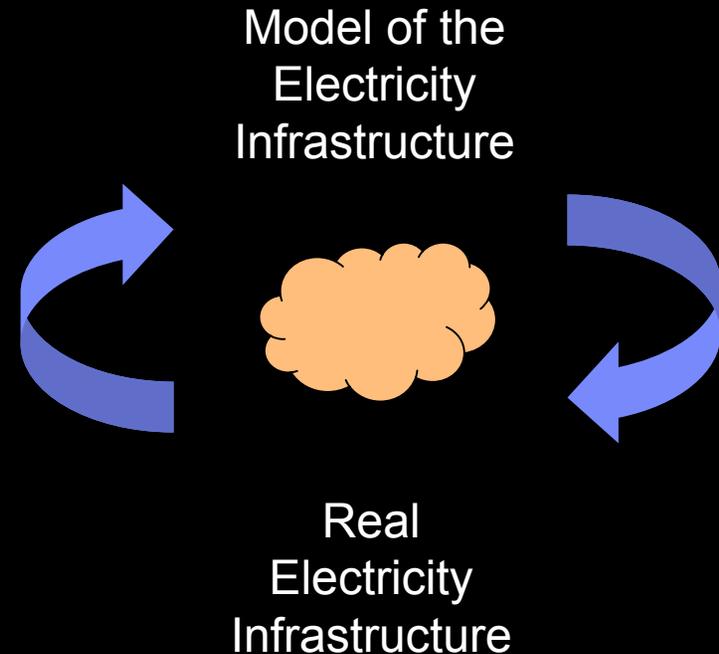

# Transformation number two...

Infrastructure begins to drive information...

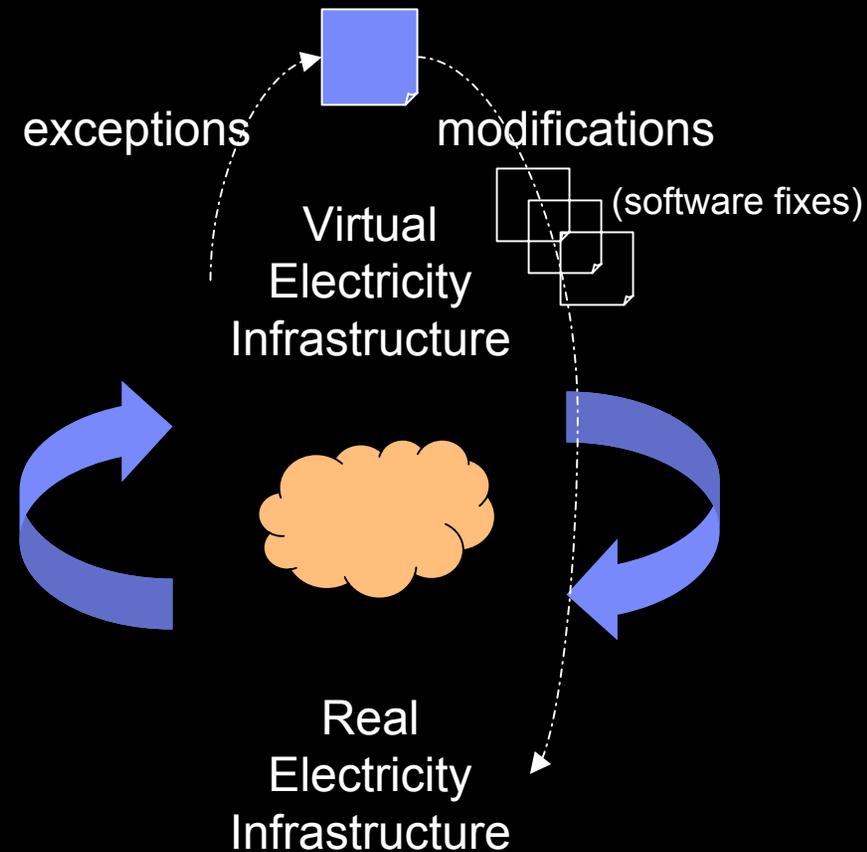

Impact...

Information  
*on-demand* –  
the “loop” is  
starting to  
close...

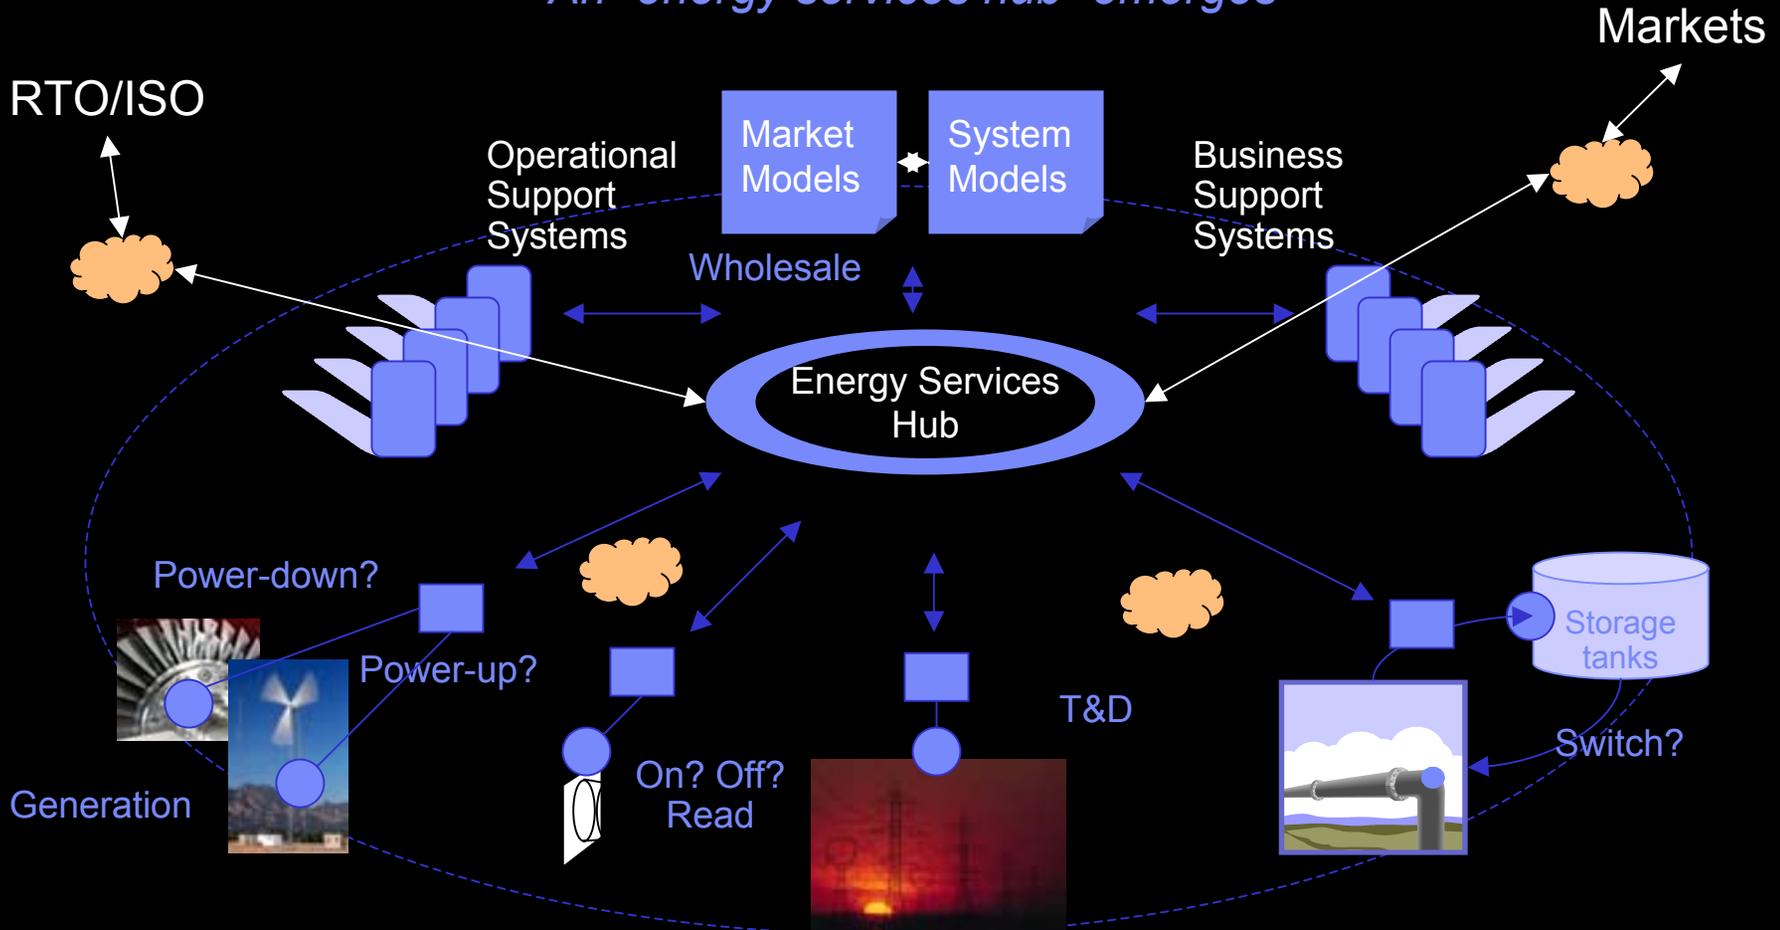

# Transformation number three...

Electricity infrastructure will become *autonomic... (self-healing)*

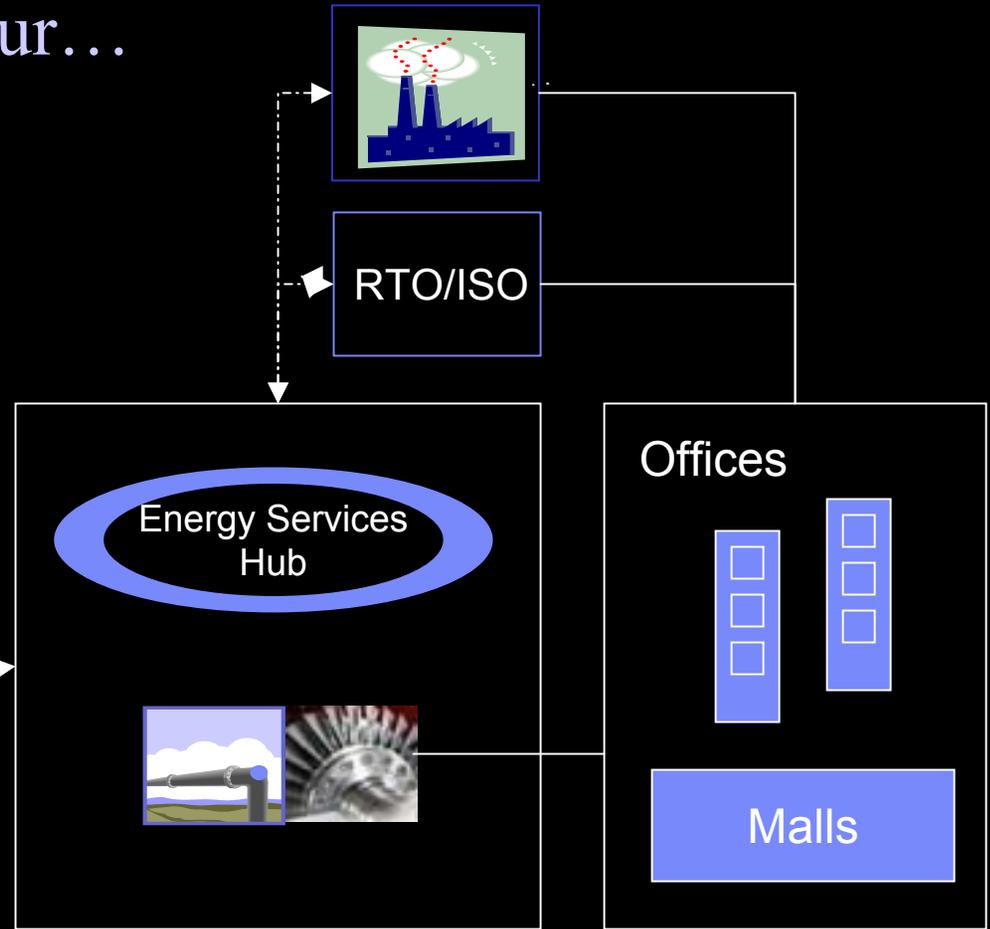

# Impact...

*An "energy services hub" emerges*

# Transformation number four...

The energy services hub enables the distributed energy model...

Energy Services Provider

# Partners...

- ABB
- Alstom
- Arcom Controls
- CES
- ESRI
- MISO
- PJM
- Schneider Electric
- Seimens
- Many others...

## Acknowledgements...

This  
presentation  
borrows  
heavily from  
the thinking &  
the work of  
many people  
at IBM...

### The short list:

Alex Morrow, Watson Fellow  
Ron Ambrosio, Watson Research  
George Hefron, Technology Grp  
Scott Burroughs, Pervasive Computing  
Scott Winters, Distinguished Engineer  
Jerry Malcolm, Master Inventor  
Paul Williamson, Software Architect  
Brad Gammons, Director  
Koustuv Ghoshal, Industry Executive  
David Samuel, GM Energy & Utilities  
Dr. Andy Stanford-Clark, Hursley Labs  
Terry Tyler, BCS  
Gerard Metzler, BCS  
Vickie Dorris, Industry Executive  
Neill J Roberts, Industry Executive  
And all the rest...
